

Paradise Street Interchange / Liverpool One

by WilkinsonEyre

The Liverpool One development around Paradise Street in Liverpool forms a key part of the city's regeneration. The new developments have created a considerably enhanced public realm and a series of new leisure, retail and interchange facilities, providing improved clarity in pedestrian and transport links between the city centre and the Arena and Convention Centre at King's Waterfront - also designed by WilkinsonEyre.

Among the first elements to be completed within Liverpool One were WilkinsonEyre's pedestrian bridge link, bus and tram interchange, multi-storey car park, and a ticketing office for interchange passengers. All elements were delivered to a challenging programme, using an innovative mix of materials and forms to strengthen the visual identity of the new development.

Details
